The precision stainless steel probe LMP 307i RS 485 is designed for continuous fill level and level measurement of water and liquid mediums.

Housing material is 1.4044; the sensor diaphragm is made of 1.4435. Standard sealing material is FKM; other materials are available on request.

The LMP 307i RS 485 features high accuracy of 0.1 % FSO and a very small thermal error. Basic element is a high quality stainless steel sensor with a digital electronics with microprocessor and 16-bit analog/digital converter. Thus it's possible to compensate the sensor specific errors as non-linearity and thermal errors actively resulting in a level transmitter with excellent measuring properties at an unusual competitive price.

Preferred areas of use are

Water / filtrated Sewage

- environmental engineering: water supply, sewage treatment

- depth or level measurement in wells
- ground water level measurement
- level measurement in open tanks
